

CLAIMS:

1. A holder for holding a hands free mobile telephone accessory of the type which has an ear piece and a microphone both attached to a common flexible phone line and spaced apart from each other, the line able to be plugged into or relative to the telephone, the holder having an ear piece attachment means (EAM) and a microphone attachment means (MAM) which are spaced apart, the construction and arrangement being that the holder can be held next to a persons head with the EAM being in or adjacent the persons ear, and the MAM being positioned to pick up speech, thereby doing away with the need to attach the microphone to clothing and to insert the ear piece every time the phone is to be used.
2. The holder of claim 1 which comprises a tubular member which can be split to open up into two halves with the inside of the tubular member having means to hold the ear piece and the microphone of the accessory in the tubular member.
3. The holder of claim 2, wherein the means is an insert of resilient foam material which will hold the ear piece and the microphone of the accessory in place.
4. The holder of claim 1, wherein the ear piece is attached to the holder for movement between an extended position where the earpiece can be inserted into a persons ear, and a retracted position.
5. The holder of claim 1, wherein the holder has a substantially plate like body.
6. The holder of claim 5, wherein the plate-like member is provided with a plurality of spaced keyhole-type slots which accommodate excess length of the wire which is part of the accessory.
7. The holder of claim 1, which comprises an elongate substantially rectangular body made from two parts which are hinged together and which are openable up to allow the accessory to be inserted into the holder, at least one compartment inside the body to hold the microphone and holding means to hold the ear piece
8. The holder of claim 1, which is formed from two halves which

can be opened up to insert the accessory, a clip on the holder which allows the body to be clipped on the person's belt, and a shroud about the ear piece area to cut down on extraneous noise.

9. The holder of claim 1 which has a substantially cylindrical body
5 with an upper and lower end piece which are removable to allow the ear piece and the microphone to be inserted into the body.

10. The holder of claim 9, wherein the cylindrical body is bendable and will hold its shape in the bent position.

11. The holder of claim 1, which has a telephone line extension and
10 retraction means.

12. The holder of claim 11, wherein the line extension and retraction means comprises an internal spool which is biased to naturally retract the line.

13. The holder of claim 1 which has an attachment means adapted
15 for engagement about a persons ear.

14. The holder of claim 1 which has an attachment means adapted for engagement with eyewear.

15. The holder of claim 1, which has a body which is telescopically extendible and retractable.
